GRAIN STORAGE SOLUTIONS

GRAIN STORAGE SOLUTIONS

Our grain storage solutions answers a wide range demands from the small on-farm bins to large-scale commercial complexes.

METALLIC FLOUR, BRAN AND DAMPENING BINS

Modular steel bins are designed for the storage of flour, semolina, bran, dampened wheat and other powder or granular products. They can be manufactured in various dimensions and storage capacities according to the purposes. Simple construction, fast assembly and hygienic design are the main benefits of modular bins for food industries. The internal surfaces of flour and semolina bins are coated with special.

Food grade epoxy powder paint while polyester powder paint is applied on the external surfaces and backed in the oven. Because of their modular structure, these bins are also easily transported assembled at the site with durable galvanized bolts.

STEEL BUILDING CONSTRUCTIONS

STEEL CONSTRUCTION OF MAIN BUILDING

Cleaning section steel construction.

Milling section steel construction.

Packing section steel construction.

BUILDING INTERIOR SILOS

Dry wheat silos, Dampening silos, Flour silos, Bran silos

SURFACE, ROOF COVERING EQUIPMENTS

Surface covering sandwiches panel works.

Roof covering sandwiches panel works.

Door, windows and floor stairs and steel supports.
